Affordable Enterprise Business Software

Tech & screens: www.elaginc.com

Solutions Problems Custom applications cost too much Galicorp systems are affordable They take too long to create 2-8 weeks in most cases They disrupt work when they are implemented 1-2 hours of initial installation, seamless thereafter I have to buy new workstations Galicorp runs on everything from Windows 98 to Windows 7. No replacements The learning curve for a new system Most systems require a morning of training or less makes everyone unproductive for too long Any curve ball thrown breaks the system Galicorp CMS has never gone down since its inception in March 2004 Software ergonomics makes using applications painful and slow Clicking one button can trigger a series of actions. We have thought hard about this. We can only display one item at a time Galicorp systems display tens of thousands of items, and can run many instances of a screen As the business changes, the application is slow to follow Galicorp clients request and receive 100+ changes per year, usually within 48 hours of a request It seems we must adapt to the software's notion of Galicorp systems are tailored to the client's process and terminology Workflow, not vice-versa

We are afterthoughts to our software vendor now the sale is made

Software with a Difference: Responsive, Reliable

Galicorp has continued its responsive maintenance program since the company's founding in 1999

Galicorp applications can:

Run as Windows Applications on An Intranet or Extranet

Run as Windows Applications from a secure Citrix Metaframe[™] Server

Run as HTML pages

Android Apps for mobile devices

Have extremely thin clients (all business logic resides in the database)

Deploy to thousands of users in minutes

Modify business logic while you work (no downtime)

Be updated the same day as the request in many cases

Automatically check for new versions when they start

Be built from the ground up in 2-8 weeks from the customer's initial commitment

Email, fax or print documents at will (and log the results)

Interface seamlessly with Microsoft Outlook, Word and Excel

Be multi-lingual

Preview 20,000+ documents in seconds before a print job (no wasting time or paper) Have three distinct security models to cherry pick your custom solution from Have a separate security model for exports (so no-one runs away with customers)

Run up to 999 copies of each screen

Retrieve 10,000-50,000 rows of data in seconds regardless of traffic

Fit several hundred reports into a

Export data to most formats from

Read, store and display 50 file formats as part of document management

single dynamic reporting screen

Create HTML Form letters for

broadcast email distribution

at work)

every screen

simultaneously (for repeated interruptions

Save each user at least an hour a day

And have a very short learning curve...

© Galicorp LTD 2000-2017

Claims Management System, Dashboard

Claims Management System, Alternate Dashboard

Some users were adamant that their need to see contact lists and claim or call information simultaneously trumped the undesirable 'cramping' effect of the original dashboard

For those users who preferred legibility, a functionally equivalent dashboard was created, one which put contact information in a tab, thereby allowing the collection of tabs to stretch across the entire screen

Galicorp uses this illustration to stress that there CAN be two solutions to a problem, and that the solutions arrived at remain affordable and easy to implement

This version of the dashboard was created in **one day.**

Customized for every preference

Interns are assigned the calls they make by analysts, and should not be privy to aggregate data, reporting or workflow. The simplest and most secure way to achieve this in a Galicorp application is to remove everything a given group should not access and deploy an entire screen. This way, unless the intern in question is sitting at an analyst's desk (or has an analyst's external web access password), it is impossible to display the restricted data.

© Galicorp LTD 2000-2017

Changes in business environment will force any corporate entity to alter its data in mass. Generally, a programmer is called in to make the necessary changes, or a temp is assigned the arduous task of altering records one by one.

One of Galicorp's solutions to this issue is the mass update screen, a utility restricted to system administrators only

Galicorp systems also keep an audit trail of every Edit/Update in the application (Locks). Optionally, customers can request that a history of data change be stored (with the understanding that storage requirements will be far greater).

For this example, we have retrieved all the 'Agway' claims with \$ amounts between 5,000 and 20,000

This customer wished to update 10 important data elements in the business, all clearly labelled beneath the master list

By pressing this button, the user will change the 4280 claims listed above to a bid amount of 42 cents (currently 41)

Quick, reversible updates

System Administration – Assignment

Assignment of work is common to all enterprises. Again, most software will force users to assign items case by case, or to create a batch by dragging and dropping items.

Administrator has selected all 'Spiegel' claims with a disposition of 'Call' and a \$ amount above 5,000

By pressing this button, these 313 claims will appear in Alex Ortega's 'Caller' screen' (Page 6).

At the customer's request, they will disappear from the 'Caller' list automatically, one by one, as Alex creates a call record for each claim – by double-clicking on the contact he is calling.

It delegates for you

Simple Reporting – Canned Reconciliation

Galicorp provides invoicing, aging, statements, and financial reporting for a number of legacy billing systems.

While feature-rich, flexible reporting is appropriate for those users engaged in research, closing, target marketing etc., making sure that the right bills are printing should be immediate and effortless.

Invoicing Reports Form 001 \mathbf{X} Invoice Reconciliation 8 Multipub Pub Group Effort Rollup Multipub Pub Effort Rollup Multipub Pub Only Rollup Multipub Total Invoicing Multipub Effort Rollup Effortnumber Lines Shipping Amount Tax Misccharge Payment Total 404445.30 226.00 6445.73 184218.87 226954.16 349 56.00 200 106223.62 728.70 3608.26 49.00 10652.80 99956.78 2 221442.12 3 424 213569.44 6466.65 8857.52 42.00 7493.49 71 42730.81 50.00 4426.30 39728.04 4 65.00 1308.53 54 38309.43 35.00 21.00 5598.25 33643.38 5 876.20 6 222 162549.59 28.00 4690.67 1374.00 3617.21 165025.05 556.50 7 13 6665.00 .00 6224.15 115.65 .00 .00 .00 8 7 4440.00 106.14 .00 4546.14

DSI's Multipub provides an invoicing report which includes Effort (column 1), Total Lines (2), and Total \$ (8).

If all sums and counts match, invoices can be printed and dispatched. Otherwise, they are identifiable by Product/Effort, and the discrepancy arrived at in minutes.

Reconcile to other systems on their terms

These two queries return dollar totals from two separate billing systems for First Union and Wachovia by Product/Account Name/Year. This was achieved by clicking on the Product, Firm and Year buttons, then pressing GO!

Rollups at the touch of a button

These aggregates are calculated and grouped on the fly from 1.2 million orders and 870,000 subscribers

In subscription billing, expiration has a meaning (see status, above left), while in advertising billing there is no notion of continuity (at least for this client). This makes putting the data in the same screen less straightforward than it may at first seem. Galicorp always consults its customer about this kind of crucial business issue, and creates a view or process that the specific customer finds comfortable and intuitive.

400,000 Work Orders and 24,000 customers on file

Reporting – Revenue Across Legacy Billing Systems

Data Warehouse To Go

Corporations waste years of time, money and personnel implementing warehouses to see the big picture. Why not use Galicorp instead?

Your choice of cash or accrual per sub-system (generally, Galicorp recommends this not be made an option button on-screen, it makes sending people incorrect numbers too easy. But, again, the customer IS always right about these issues. If a button is requested, it can be provided).

Multi-Function Reporting – All-in-One

Format Invoices Multiput/Single1	Edit Save Cancel		Add Edit Save Cancel Delete		Add Edit Save Cancel Delete

Letters, one form of subscription invoicing, are imported as rows from the legacy billing system, Multipub Logos, signatures and names are associated with each product

Text for the letter is associated with each product. Note that the setup CAN be copied from another product, minimizing typing. The third step, in the 3rd tab (not shown) is to associate the text with an effort number, or level of dunning (i.e. effort 1 is 1st notice, effort 6 is the sixth, 18 weeks later, and might contain a paraphrase of 'pay up, buddy, or else!')

Invoicing – Dynamic Letter-Based with Dunning Notice - Preview

Shipping Logistics – Product Distribution and Bundling

This client realized that shippers vary in efficiency and price according to: destination, weight, and batch size. This sub-system creates files destined to each shipper's PC (they did not allow direct connections when this screen was created)

Bundling is the practice of looking up quantity per box by product, and then creating 1 row in the output file for every box of product (the shipper requires this to print barcoded labels)

Saves money shipping products

Before this screen reduced it to seconds, this process took three to five man-days for a 2000-3000 order 'major

release'

Browser Only – Web Clients – Galicorp Application Look and Feel

Galicorp recommends Citrix Metaframe to deploy its apps over the Web. It has become more affordable, and it is fast, reliable and secure. There is only a 10-15% performance degradation when comparing to internal network speeds, because Citrix servers remain within the customer's firewall. This is basically unbeatable for deployment on the web if the customer expects data throughput consistent with internal benchmarks, but from any workstation worldwide without a VPN.

This is a PHP-HTML version of the Galicorp look and feel. Limitations of the web and the verboseness of HTML combine to make this a slower, less reliable alternative than Windows/Citrix, but since the interface is nearly identical, this extranet solution requires no re-training etc.
